

Klogu Bizz

GST BILLING SUITE

Every invoice you send is a *tax declaration*.

KloguBizz is GST billing for Indian businesses that treats it that way. The tax split, the place of supply, the HSN code and the invoice series are decided by the software, computed once, and carried identically to the screen, the PDF and the return.

14 days free, no card From ₹999 a month Built for **GSTR-1, 3B, CMP-08**

Intra-state — CGST + SGST

DESCRIPTION	HSN	QTY	RATE	AMOUNT
Steel fabrication	998314	3	45,000.00	1,35,000.00
Maintenance contract	998729	1	1,20,000.00	1,20,000.00
Taxable value				₹2,55,000.00
CGST @ 9%				₹22,950.00
SGST @ 9%				₹22,950.00
Total				₹3,00,900.00

Payment terms: Net 15 · All items @ 18% GST

Authorised Signatory

27 → 27

The buyer's state matches yours, so this is **CGST + SGST**, not IGST. The software reads it from the GSTIN; nobody chooses it from a dropdown.

AST-2026-247

Your prefix, your series, **consecutive within the financial year** — and it can be moved forward when you migrate, never back onto a number already issued.

998314

HSN and SAC codes are carried through to the **HSN summary in GSTR-1**, so the return is assembled from the invoices rather than retyped.

The mistakes are small.
The consequences
arrive months later.

A wrong tax split

Charging IGST where CGST + SGST was due — or the reverse — is one wrong state code. It surfaces when GSTR-1 and GSTR-3B stop reconciling, by which point every invoice to that customer carries the same error.

A GSTIN that belongs to nobody

A transposed pair of characters passes a format check. The cost lands on your customer, whose input tax credit is refused — and then on you, when they ask why.

A duplicated invoice number

A tax invoice series has to be consecutive within the financial year. A gap is a question with an answer. Two invoices carrying the same number is a question without one, and it cannot be undone.

Credit you never claimed

Purchase bills that were never matched against GSTR-2B are input tax credit sitting unclaimed, and a supplier who did not file is credit at risk that nobody told you about.

Twenty-two things it does, and each one is enforced.

Every capability below maps to a key the server checks, not a line of copy on a pricing page. If your plan includes it, it is unlocked; if it does not, the screen is hidden and the API refuses it.

01 Billing, on every plan

- GST invoices, quotations, proforma invoices and delivery challans
- Customer and product catalogue, with HSN and SAC codes
- Payment recording, receipts and part-payments
- Automatic payment reminders
- Bill Generator for over-the-counter billing
- GSTR-1 and GSTR-3B, with an HSN summary

02 Buying and stock

- Purchase bills, vendors and input tax credit
- Stock ledger, low-stock alerts, batch and expiry tracking
- Stock valuation on FIFO or weighted average, with cost of goods sold
- Multiple warehouses, and transfers between them

03 Getting paid

- Online payment links your customers can pay from
- Recurring invoices, generated automatically
- GST credit notes raised against an invoice
- Receivables ageing, collection reports and customer statements

04 Returns and the books

- GSTR-2B reconciliation, showing input credit at risk
- Composition scheme (CMP-08) and quarterly QRMP filing
- Operating expenses, by category
- Profit and loss, with real cost of goods sold
- Excel and CSV exports of invoices, ageing and returns
- E-invoicing: IRN and the signed QR, filed to the government portal

05 Making it yours

- Your logo, letterhead, signature and invoice templates
- Your own numbering series for every document type
- Bulk upload of products and customers from a spreadsheet

06 On a phone

- Installs as an app — every screen measured at 390px
- Raise an invoice, take a payment, check what is overdue
- Works the same as the desktop, because it is the same product

Four plans. The bill is the price.

Every plan starts with a 14-day trial, at Business-tier capability, without a card. Yearly billing is ten months for twelve.

STARTER

₹999

per month

₹9,990 billed yearly

100 invoices a month

3 users

Billing, payments, reminders and **GST returns**.

GROWTH

₹2,499

per month

₹24,990 billed yearly

500 invoices a month

10 users

Adds purchases, **inventory**, stock valuation, credit notes, recurring invoices, payment links and your own branding.

BUSINESS

₹5,999

per month

₹59,990 billed yearly

2,000 invoices a month

25 users

Adds expenses, **profit and loss**, warehouses, GSTR-2B, composition and QRMP, receivables, bulk upload, exports and **e-invoicing (IRN)**.

ENTERPRISE

₹9,999

per month

₹99,990 billed yearly

999,999 invoices a month

999 users

Everything in Business. What changes at this tier is **the ceiling**, not the feature list.

The list above is short by choice.

E-way bills are not live.

Everything around them is built and tested — eligibility, validation, the payload, the validity window — but the connection to the government portal is not written, so nothing can actually be filed. It goes on the list the day that adapter ships and not a day before.

We are telling you this on the pricing page rather than after you have paid, because the alternative is you finding out during your first month-end. If e-way bills are what you need today, this is not yet the product for you. E-invoicing (IRN and the signed QR, filed to the real government portal) is live at the Business tier and above — it is on the list opposite, not on this one.

An accounting system is only as good as its trail.

- **Two-factor authentication**

Time-based codes with recovery codes, for anyone on your team. Your books are otherwise one password away from your bank details.

- **Your data leaves with you**

A full export of everything on your account, in Excel and CSV, on request from inside the app.

- **An activity log you can read**

Who changed what, and when — including numbering changes, which are otherwise invisible after the fact.

- **Roles that mean something**

Owner, accountant and viewer are enforced by the server, not hidden in the interface.

- **Nothing is really deleted**

A customer with invoices cannot be removed, and a deleted record is recoverable. An invoice must never render a blank buyer.

- **One tenant cannot see another**

Every query is scoped to your organisation at the server, and the boundary is covered by its own tests.

07 START

Raise your first invoice in about four minutes.

Sign up, add one customer, add one item, and send it. Nothing to install, no card, and the trial runs at Business-tier capability so you are evaluating the whole product rather than a sample of it.

Start the 14-day trial

Every capability, price, user limit and invoice limit on this page is read from the running product, and both GSTINs in the sample invoice pass the checksum the product enforces. E-way bills are named as absent for the same reason; e-invoicing is named as shipped for it too. The two contact details marked in amber are placeholders — replace them before this goes to anyone.
